

Quad Plus®

Leading Custom E-House Manufacturer

Save Space and Downtime with the Flexibility of an E-House

E-houses are custom-engineered enclosures ready to house a broad array of electrical and automation equipment without requiring major changes to your floor plan or infrastructure. We construct and fully test each unique e-house at our facility before delivering it to your site for maximum installation efficiency.

Why Choose an E-House?

E-houses allow you to get a complete package. We build your e-house at our facility to your specifications, test it to ensure proper operation, and then deliver it to your site.

Environmentally challenging conditions can make it difficult to keep your sensitive electrical and mechanical equipment safe. An e-house is a simple, straightforward way to achieve this, all with faster installation times, flexible designs, and useful additions such as HVAC, alarm, and fire suppression systems.

Customized to Meet Your Needs

Shipping Container

We can repurpose a sea-worthy shipping container and modify it to be used as an e-House. These structures are not restricted in length; we have provided these as long as 80 feet and designed them as long as 100 feet.

Control Centers and Site Offices

Using either a container or purpose-built style structure, we create an operator station with the components you need. For example, a simple desk, full office, bathroom, or even a kitchen can be included.

Purpose Built

Our e-houses are designed with your needs in mind. Standard options can help get you started, but each construction is built for your unique purposes.

On-Site Labs

Like a control center or site office construction, we can design a laboratory that meets the needs of your site or production requirements. This can be a cost-effective way to create a safe, secure location for testing and equipment indoors or out.

Electrical House Features

Flexible Designs

Built to fit your space.

Enjoy more flexibility with your floor plan and get the right protection for your sensitive equipment with e-houses customized to fit your location.

Faster Installation

Prefabricated, tested, and ready for delivery.

Your e-house is constructed in our facility with equipment pre-installed and wiring completed. Your systems are fully parameterized and factory acceptance tested before shipment to speed up installation and reduce startup time.

Customizable Features

Choose options that make sense for your location.

Choose from a sub-floor or raised tray design and with HVAC installed or ready for you to add HVAC. We also offer alarm and fire suppression systems for maximum protection.

Durable Protection Solution

Rest easy, knowing your equipment is safe.

From tough environmental conditions to remote locations and other problematic areas, enjoy long-lasting, weather-ready electrical houses ready for your daily challenges.

The convenience of an e-house; the expertise of Quad Plus.

You need reliable power solutions that are flexible, tailored to meet the exacting specifications of your project, and ready to stand up to extreme environmental conditions.

Take the first step towards dependable power solutions with Quad Plus, the global leader in custom-fabricated solutions. Contact us today to design your tailor-made e-house, prepped for immediate installation.
